FORM.COM DATA EXPORT CAPABILITIES

Standard Data Export Options

Excel **.xls**	• Export row data as labels, values or both; summary report and links to unique responses can be included.
Comma delimited **.csv**	• Export row data as labels, values or both; summary report and links to unique responses can be included. • Can be imported back into current or similar forms.
XML Schema **.zip with .xml/.xsd**	• Exporting produces two XML files: surveys.xml and responses.xml. • Surveys.xml contains 4 tables that describe the structure of your forms and surveys. • Responses.xml contains tables with data concerning respondents and their answers to questions. • Each of the files are accompanied by an .XSD file that describes the data format for the XML files.
SPSS Statistics **.sav**	• Export row data as labels, values or both. Labels and values can be toggled for multi-choice question types. • 20+ encodings available. • SPSS version 16.0 or higher is required.
Portable Document Format **.pdf**	• Convert summary reports into black and white or color PDF. • Both portrait and landscape orientations are available.

- Data export can be scheduled and automated so the system will place files of any format into an indicated S/FTP location on a regular basis.

- Both "Completed" and "In Progress" responses can be included in the data export.

- Question text, answer options, and column headers can be customized, hidden, or filtered to only export the required data.

- Filters can be based on any combination of data or submission dates.

- API calls return data as OOP objects.

- Along with collected data, responses, and distribution statistics, you can also export tasks and account audit logs.

Advanced Data Export Options

Plugins *Applied directly to the form once, then triggered upon form submission.*	• **Remote Data Sender** allows you to send specified information to a third party application in the form of an HTTP(S) request (by sending a custom link to a remote URL). • **Logical Remote Data Sender** allows you to send specified information to a third party application in the form of an HTTP(S) request (by sending a custom link to a remote URL) depending on the data collected in the form. • **Remote Data Sender Plugin (XML/JSON)** sends a post request that contains data in XML/JSON format to a third party application.
SOAP API	• Common services for getting data back are Form Design and Form Result Management. • More services and their details can be found here.
Remote Data Retrieval *HTTP(S) requests for remote file exports.*	• Export files in Excel, CSV, XML and SPSS formats.
(S)FTP Synchronization	• Data export can be scheduled and automated so that the system will send Excel, CSV, XML, SPSS or PDF files into an indicated (S)FTP location on a regular basis. • Local data tables (such as Contact Manager and Data Models) can be maintained (exported and/or updated) through the (S)FTP synchronization.
Custom Synchronization	• Implement custom JavaScript within forms. • WorldAPP has its own JavaScript library to help with custom development.

- Multiple plugins can be set up on a single form, then triggered in response to different data combinations.

- For API usage, a combination of the Respondent Id Saver and Remote Data Sender plugins helps create unique IDs and synchronize them with your database in real-time.

- A JavaScript section is open and available on the application account side.
