

INTEGRATED MOBILE INSPECTION SOLUTIONS

Manufacturing companies are using Form.com for:

Quality Control Audits

- Track nonconformance trends and compare vendor quality using dashboard analytics; over time, location, or on a case-to-case basis
- Quickly respond to nonconformance with automated workflows and task management
- Prove ISO compliance with forms and checklists that ensure quality management requirements are being met
- Forms are designed for ease-of-use and high adoptability

Process Inspections

- Form.com integrates with your existing data to prepopulate forms
- Forms change dynamically based on who you are, where you are, and what you're doing
- Customized scoring systems can measure if your team is meeting or exceeding expected standards
- Create automated remediation plans as whole documents or individual tasks with due dates and criticality levels

Facility Inspections

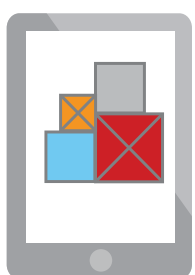

- Offline functionality makes inspections possible even without an internet connection
- Time and date stamps, GPS location, and inspector/facility/management info can be automatically filled into forms
- Pictures can be embedded directly into the form and drawn over to highlight violations
- Embed reference information into forms to ensure clarity and understanding

Health and Safety Audits

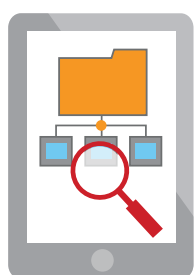

- Create forms for personnel, property, and vehicle audits with fully customizable criteria to ensure that all regulations are met
- Automatic notifications can be sent to appropriate parties when violations are found
- At the end of an inspection, specific remediation procedures can be generated for each violation
- Improve compliancy and ongoing education with daily checklists and ad hoc inspections
